Maximum Marks	2 Marks

Solution Architecture

The **Sports Hall Booking System** is designed to automate the complete sports hall reservation process for students, faculty, and administrators. The system enables users to check the availability of sports halls, submit booking requests, receive approvals, and manage reservations through a centralized platform. This eliminates manual booking methods, prevents scheduling conflicts, reduces paperwork, and improves operational efficiency.

The architecture follows a centralized workflow using the **ServiceNow Platform**. Users access the booking portal to submit reservation requests for available sports halls. These requests are routed to the Sports Administrator for approval through automated workflows. Once approved, the booking is confirmed and notifications are sent to users. The system maintains booking records, generates reports, and provides real-time availability to ensure efficient utilization of sports facilities.
